

**MUKHTAR IBRAHIM TAMBUWAL**

**UI/UX DESIGN COURSE**

**PRACTICAL EXERCISE 1: PRODUCT ANALYSIS**

**Questions:**

- Choose a familiar app or website.
- List one UX good point, like an easy sign-up process, and one UI good point, like clear, readable fonts.
- Then note one area to improve (UX or UI)

**Solution:**

**App Chosen**

I chose WhatsApp.

**One UX Good Point**

One good UX feature of WhatsApp is the easy sign-up process. Users can quickly create an account using their phone number without filling out long forms, making the onboarding process fast and convenient.

**One UI Good Point**

One good UI feature is the clear and readable design. The fonts are easy to read, the icons are simple to understand, and the chat interface is neat and user-friendly.

**One Area to Improve (UX)**

One area that needs improvement is chat organization. Users with many chats may find it difficult to manage conversations. Adding features like folders or better chat categorization would improve the user experience.
